Rotating Anode X-Ray Tube Housing Assembly

- Rotating anode X-ray tube housing assembly for the purpose of general diagnostic X-ray procedures.
- Specially processed Rhenium-tungsten faced molybdenum target of 74 mm diameter.
- These tubes have foci 1.5 mm and 0.6 mm, and are available for a maximum tube voltage 125 kV with Three-phase generator.
- Accommodated with IEC 60526 type high-voltage cable receptacles.

General Data

IEC Classification ................................................................. Class I Type B

Electrical:
- Circuit (Center-grounded) ......................................................... Three-phase full-wave rectified
- Nominal Tube Voltage:
  - Radiographic ................................................................. 40 ~ 125 kV Max.
- Nominal Focal Spot Value:
  - Large Focus ................................................................. 1.5 mm
  - Small Focus ................................................................. 0.6 mm
- Nominal Anode Input Power (at 0.1s):
  - 60 Hz
    - Large Focus ................................................................. 50 kW
    - Small Focus ................................................................. 18 kW
Motor Ratings:

</tbody>
</table>

Note: 1) The every applied voltage must be never exceeded 110% of the above specification.
2) The speed-up time is allowed up to 110% of the above specification.

Anode Speed:

50 Hz .......................................................... 2700 min⁻¹ Min.
60 Hz .......................................................... 3200 min⁻¹ Min.

Stator impedance:
- Common-Main Winding ........................................... 27.5 Ω
- Common-Auxiliary Winding .................................... 58.0 Ω

Resistance between Housing and Low Voltage Terminals ........................................ 2 MΩ Min.

Normal operating range of the housing temperature ........................................ 10 ~ 75 °C

Mechanical:

Dimensions: ................................................................. See dimensional outline
- Overall Length ...................................................... 479 mm
- Maximum Diameter ............................................... 152.4 mm

Target:
- Angle ................................................................. 14 degrees
- Construction ...................................................... Rhenium-Tungsten faced molybdenum
- Permanent Filtration ............................................... 0.9 mm Al / 75 kV IEC 60522 / 2003

Radiation Protection (To meet the requirements of IEC 60601-1-3):
- Leakage Technique Factor ...................................... 125 kV 4 mA
- X-ray Coverage ..................................................... 354 × 354 mm at SID 750 mm
- Weight (Approx.) .................................................... 16 kg

High Tension Terminals .............................................. To meet the requirements of IEC 60526

Cooling Method ....................................................... Natural or forced air

Tube Housing Model Number:
- E7242X ................................................................. XH-121
- E7242FX .............................................................. XH-126
- E7242GX .............................................................. XH-150
Absolute Maximum and Minimum Ratings
(At any time, these values must not be exceeded.)

Maximum Tube Voltage:
- Radiographic ........................................................................................................ 125 kV
- Maximum Voltage to Ground .................................................................................. 65 kV
- Minimum Tube Voltage ........................................................................................ 40 kV

Maximum Tube Current:
- Large Focus ........................................................................................................... 800 mA
- Small Focus ............................................................................................................. 290 mA

Maximum Filament Current:
- Large Focus ......................................................................................................... 5.3 A
- Small Focus ............................................................................................................. 5.3 A

Filament Voltage:
- Large Focus (At max. filament current 5.3 A) ...................................................... 10.6 ~ 14.4 V
- Small Focus (At max. filament current 5.3 A) ....................................................... 5.1 ~ 6.9 V

Filament Frequency Limits ..................................................................................... 0 ~ 25 kHz

Average Input Power .................................................................................................. 60 W (85 HU/s)
(Repeated radiographic exposure)

Thermal Characteristics:
- Anode Heat Storage Capacity ........................................................................ 142 kJ (200 kHU)
- Maximum Anode Heat Dissipation Rate ............................................................ 616 W (868 HU/s)
- Housing Heat Storage Capacity ........................................................................ 900 kJ (1250 kHU)
- Maximum Housing Heat Dissipation Rate:
  - Without Air-circulator ....................................................................................... 180 W (15 kHU/min)
Environmental Limits

Operating Limits:

- **Temperature**: 10 ~ 40 °C
- **Humidity**: 30 ~ 85 % (No condensation)
- **Atmospheric Pressure**: 70 ~ 106 kPa

Shipping and Storage Limits:

- **Temperature**: -20 ~ 70 °C
- **Humidity**: 20 ~ 90 % (No condensation)
- **Atmospheric Pressure**: 50 ~ 106 kPa
Warning

Warning to Interface with X-ray Generator

1. Housing Rupture
   Never input over-rated power to x-ray tube assembly.
   If the input power is extremely higher than specification, it may cause the over temperature of anode, insert tube glass shatter and ultimately the following serious problems due to generating over-pressure by oil vaporization inside housing assembly.
   In such a critical condition, the safety thermal switch can not protect x-ray tube even if it works.
   * Housing sealing parts (cathode side) rupture
   * Human injury including burns due to hot oil escape
   * Fire accident due to flaming anode target
   We strongly request that the x-ray generator should have a protective function which manages input power to x-ray tube assembly.
Cautions

Caution to Interface with X-ray Generator

1. Over Rating
   X-ray tube assembly can be broken with applying just one over rated shot.
   Please read the technical data sheets carefully and follow the instructions.

2. Permanent Filtration
   The total filtration and the distance between x-ray focal spot and human body are regulated legally.
   They should be complied with the regulation.

3. Safety Thermal Switch
   X-ray tube assembly has safety thermal switch to prohibit further input power when the tube housing reaches to the temperature of switch-open.
   The switch should be hooked up with the x-ray generator which control output power to x-ray tube assembly.
   Even if the switch works, never turn the system power off and the cooling unit should be activated.

4. Unexpected Malfunction
   X-ray tube assembly may have the risk to be unexpectedly malfunctioning due to life termination or failure. If the serious problems caused by the above risk is expected, we recommend to have a contingency plan to avoid such a case.

5. New Application
   If you use the product with new application not to be mentioned in this specification or with different type of x-ray generator, please contact to us for confirming its availability.
Caution for Installation, Adjustment and Maintenance

1. Qualified Persons
   Only qualified persons who have technical training and professional knowledge can handle x-ray tube assembly.

2. Fragile Glass
   X-ray tube is assembled with glass, therefore, it can be broken with the mechanical vibration or pulsed shock over 19.6m/s² (2G).
   Careful handling is required to treat or transport.

3. Ground Terminal
   X-ray tube assembly has ground terminal. Ground cable should be connected.

4. High Voltage
   All x-ray tubes operate at voltages high enough to kill through electrical shock. Never touch the high voltage delivered plugs or terminals.
   When direct access to such parts is required, the primary circuit should be disabled and high voltage capacitors/cables discharged.

5. High Voltage Plug
   High voltage plug should be cleaned up and free from any physical damages. Silicon compound application is required for high voltage stability.

6. Operation Atmosphere
   X-ray tube assembly is not allowed to use in the atmosphere of flammable or corrosive gas.

7. Protective Cover
   X-ray tube assembly is not allowed to use without the protective cover attached.

8. Handling
   Appropriate jig or tools are required for tube installation to avoid physical damages.

9. Returning Tube
   X-ray tube assembly should be repackaged with the original material when it is returned back for quality examination in our factory.
   Be careful to put the tube upside cathode. If the packaging is not proper, the tube may not be correctly examined.
Caution in Operation

1. X-Ray Radiation
   X-ray tube assembly should have the beam limiting equipment mounted on the x-ray port to protect unnecessary radiation.

2. Dielectric Oil
   X-ray tube assembly has dielectric oil contained for high voltage stability. As it is poisonous for human health, if it is exposed to the non-restricted area, it should be disposed as following to the local regulation.

3. Operation Atmosphere
   X-ray tube assembly is not allowed to use in the atmosphere of flammable or corrosive gas.

4. Lead Disposition
   X-ray tube housing is lined with lead to protect unnecessary radiation. As the lead powder or vapor is harmful for human health, it should be disposed as following to the local regulation or returned back to us with your cost of transportation. We dispose it in our facility with free of charge.

5. X-ray tube housing temperature
   Do not touch on X-ray tube housing surface just after operation due to high temperature.
   Stay X-ray tube to be cooled.

6. Any Malfunction
   Please contact to your system service person immediately, if any malfunction is noticed.
Caution Label

(a) This label is a caution label to notify the user of the following point.
"Housing end cap is used to protect the electric shock and x-ray leakage."

Attachment position: X-ray tube assembly housing end cap
